Comprehension

Read the following passage and answer the question that follow.

Plants need sunlight and water to make their own food. You can do an experiment to test if this is true. Place a bucket over a patch of green grass. After a few days, lift the bucket. You will see that the grass is not as green anymore. If you leave the bucket in place for a week, the grass will become very dull. This happens because the grass cannot make food in the dark. Remove the bucket. In a few days, the grass will start turning green again.

1. What is the main point of this passage?
2. What is an experiment?
3. What happens after a few days?
4. What is the opposite of dull?
5. According to the passage, how long does it take for the grass to become dull?
